

Dr. Schiller received a B.S. from Hofstra University and a Ph.D. in biochemistry from Utah State University. He has served on the faculty at the Johns Hopkins School of Medicine, University of Connecticut Health Center, and is now a professor at the University of Nevada, Las Vegas. His research focuses on building and scientifically testing sequence- and structure-based bioinformatic tools and their application to HIV and human genetics. He has published 75 research papers in well-respected journals including *Neuron*, *Nature Methods*, *Molecular Cell* and *Science Signaling*. His research has been supported by 24 research grants for ~\$33 M, mostly from the National Institutes of Health. He has designed and taught several undergraduate, graduate and medical school classes. Dr. Schiller has invented several new biotechnologies and has originated and served as CEO of several companies. He is the founder and Executive Director of the Nevada Institute of Personalized Medicine (NIPM). In just four years since its origination, NIPM has applied for over \$110 M in research funding and won ~\$20 M including a Center of Excellence grant from National Institutes of Health where Dr. Schiller is the PI.
