

Sunil K. Shaw, PhD, is the Program Director for the COBRE for Perinatal Biology, at Women and Infants' Hospital and Brown University in Providence, Rhode Island. Prior to this he was the Research Core Director for the COBRE, so he has many years of experience with the IDeA program. He appreciates the value of collaboration, and has supported interactions with other IDeA facilities both within Rhode Island and around the country. In his role as core director he has trained over 225 students, including undergraduate and graduate students, postdoctoral and medical fellows. Dr. Shaw has chaired scientific conferences on Infectious Diseases and Immunity.

His research focuses on *Candida* yeast, and leukocyte and vascular biology.
